Types of Learning

i) Supervised Learning (it will have data & labels)
ii) Semi - Supervised Learning (some data or all data but some few labels)
iii) Un supervised Learning (only data & no labels)
iv) *imp Transfer Learning (patterns of one dataset / model used on another model)

Deep Learning Use Cases:

→ Recommendation (eg: yt video)
→ Translation (eg: google translation)
→ Speech recognition (eg: alexa)
→ Computer vision (eg: finding objects)
→ Natural Language Processing. (eg: spam / non spam email)
